Network Management Policy

Randolph Communications has adopted the following network management practices, performance characteristics, and commercial terms and conditions for its broadband Internet access services in compliance with the Federal Communications Commission's ("FCC's) Open Internet Framework requirements (Title 47, Part 8, Preserving the Open Internet).

These practices, characteristics, terms and conditions are intended to help preserve the Internet as an open framework that enables consumer choice, freedom of expression, end-user control, competition, and freedom to innovate without permission, while permitting the Company to manage its network reasonably.

These practices, characteristics, terms and conditions have been in effect since August 18, 2014.

RC may add, delete, or modify certain practices, performance characteristics, terms and conditions from time to time at its discretion. It will provide clear written notice of these changes on this website, but will not notify customers, content providers, applications providers, service providers or device providers individually of such changes by bill inserts, e-mails, tweets, telephone calls or other direct communications unless specifically required to do so by federal or state authorities. RC will provide as much advance notice as practicable of such changes. It will normally endeavor to furnish written notice on this website thirty (30) days before changes become effective, but, reserves the right to use a shorter notice period when regulatory, operational, technical or other circumstances warrant.

Network Management Practices

RC manages its network with the goal of providing the best practicable broadband Internet experience to all of its customers. Within the scope of its resources, it attempts to deploy and maintain adequate capacity and facilities within its own network, and to acquire sufficient Middle Mile capacity or facilities outside its service area to connect with the Internet. RC and its staff use their best efforts to monitor, address and minimize (but do not guarantee that they can prevent) the effects of spam, viruses, security attacks, network congestion, and other phenomena that can degrade the service of affected customers.

I.   Managing Congestion

Congestion is an Internet access service problem that can slow web browsing, downloading, and other activities of the customers during certain peak usage periods.   Congestion may be caused by capacity limits and bottlenecks in a service provider's own network, or by limitations in the capacity of the Middle Mile transport facilities and services that many rural service providers must purchase from unrelated entities to carry the traffic of their customers between their service areas and the closest Internet nodes.

If significant congestion problems arise in the future, RC most desired approach is to determine the source of the problem, and to increase the capacity of the affected portions of its network and/or of its Middle Mile routes where warranted.   However, network and Middle Mile upgrades often cannot be accomplished instantaneously because they require negotiations, authorizations and agreements with multiple unrelated entities such as lenders, government agencies, equipment vendors, property owners and other carriers.

If or when network and/or Middle Mile upgrades are not able to be deployed on a timely or reasonable basis, RC reserves the right to monitor and identify which customer accounts are using the greatest amount of bandwidth during periods of heavy congestion, and to contact those "high-volume customers" to work out a solution to the problem. RC's preferred solution will be to help such "high-volume customers" find acceptable times during non-peak periods to engage in the same activities.

If that preferred solution is not possible, the Company reserves the right to manage temporarily the Internet traffic of "high-volume customers" during periods of significant congestion until such periods of congestion pass. This temporary traffic management will be accomplished by technically and commercially feasible methods that are available or that become available in the future. Affected "high-volume customers" will still be able to access the Internet and engage in any and all online activities they desire. However, during periods of congestion they may experience conditions such as longer times to download or upload files, slower Web surfing, and/or slower movements during online game playing.

Customers should note that any temporary traffic management practices employed by the Company will impact only identified and notified "high-volume customers" during periods when congestion problems are experienced and will not be based upon the types of content, applications, services, or devices such customers use. On the basis of its knowledge and experience as of August 2014, the Company expects that periods of temporary traffic management, if any, will be brief and infrequent.

For purposes of its congestion management practices, RC will consider a period in which a "congestion problem" arises and exists to be one where the congestion last longer than two hours. It will consider a "high-volume customer" as one that uses more than 50 Gigabytes of bandwidth per month.

II.   Application-Specific Behavior Practices

RC does not favor or inhibit certain applications or classes of applications. Customers may use any lawful and commercially available application which they desire on RC's network.

RC does not normally monitor the contents of the traffic or applications of its customers. It undertakes no obligation to monitor or investigate the lawfulness of the applications used by its customers. If any party contacts RC with a substantial allegation that an application being used by a customer is unlawful, RC will investigate the matter (including consultation, as it deems appropriate, with attorneys, consultants, federal or state regulators, and/or federal, state or local law enforcement agencies), and will take appropriate actions to deal with the use of applications that are demonstrated to be unlawful.

Customers may occasionally develop their own applications or modify commercially available applications. RC will not prohibit the use of customer-developed or modified applications unless there is a reasonable belief that such applications will cause harm to its network.

RC does not block or rate-control specific protocols or protocol ports.

RC does not modify protocol fields in ways that are not prescribed by the applicable protocol standards.

III.   Device Attachment Rules

RC does not have any approval procedures that must be satisfied before a device can be connected to its network. Customers may use any lawful, compatible, type-accepted (if necessary) and commercially available device which they desire on the Company's network, as long as such device does not harm the network.

RC does not normally monitor the devices used by its customers. It warns customers that some types of devices (for example, Data Over Cable Service Interface Specification ('DOCSIS') devices intended for use on cable broadband networks) may not be compatible with its fiber optic and digital subscriber line ("DSL") network.

RC undertakes no obligation to monitor or investigate the lawfulness of the devices used by its customers. If any party contacts the Company with a substantial allegation that a device being used by a customer is unlawful, the Company will investigate the matter (including consultation, as it deems appropriate, with

attorneys, consultants, federal or state regulators, and/or federal, state or local law enforcement agencies), and will take appropriate actions to deal with the use of a device that is demonstrated to be unlawful.

Customers may occasionally develop their own devices or modify commercially available devices. RC will not prohibit the use of lawful customer-developed or modified devices unless there is a reasonable belief that such devices will cause harm to its network.

IV. Security Practices

RC does not normally monitor the traffic of its customers. It undertakes no obligation to monitor or protect such customer traffic from spam, viruses, denial-of-service attacks, or other malicious, unlawful or unwanted activities.

RC recognizes that customers can purchase spam filtering and anti-virus software from commercial vendors to meet their needs. RC may from time to time offer anti-spam and/or anti-virus software or services to customers who desire to purchase them from RC. When offered, these software or services will be described and priced in other sections of this website and in the Company's sales and marketing materials. Customers are free to obtain anti-spam and/or anti-virus software or services from any source they desire, as long as such software or services do not disrupt or degrade the traffic of other customers of RC or harm the network.

A customer that is subjected to a denial-of-service attack, or similar malicious, unlawful or unwanted activity, is urged to notify the Company as soon as possible. RC will work with the customer, other service providers, federal and state regulators, and/or law enforcement to determine the source of such activity, and to take appropriate, and technically and economically reasonable efforts to address the matter.

RC employs commercially appropriate security procedures to protect its network and its customer records from unauthorized access by third parties. RC does not guarantee that it can protect customers from any and/or all security breaches.

V. Traffic Blocking

RC does not block any lawful content, applications, devices, and/or non-harmful devices.

The only potential exceptions where blocking may occur entail the unlawful or harmful circumstances set forth in Sections I. through IV. above. RC believes that all such circumstances constitute reasonable network management practices.

RC does not knowingly and intentionally impair, degrade or delay the traffic on its network so as to render effectively unusable certain content, applications, services and/or non-harmful devices. However, the Company notes that congestion may from time to time impair, degrade, or delay some traffic.

RC does not charge edge service providers of content, applications, services and/or devices any fees simply for transporting traffic between them and its customers.

Performance Characteristics

Many of the service and performance characteristics of RC's broadband Internet access services are contained in the service offering portions of this website. RC offers different tiers of service at different prices, and changes these from time to time.

I. **General Service Description**

RC offers broadband service over DSL, and FTTH facilities. RC offers several different service tiers ranging from 1.5Mbps to 1Gbps. RC reserves the right to change service tiers at any time. Not all service tiers are offered on all technologies. Service offerings are detailed in the Internet section of the website. www.rtmc.net.

II. **Specialized Services**

As of August 2014, this specialized service has not adversely affected the last-mile capacity available for the Company's broadband Internet access services, or the performance of such services. Customer should note that significantly heavier use of specialized services (particularly IP video services) may impact the available capacity for and/or the performance of its broadband Internet access services. The Company will continue to monitor this situation.

RC provides internet protocol television, or, IPTV services to end users. This service, also known as Specialized Service, is separated from the company's best efforts internet services on the network. Since Specialized traffic has dedicated bandwidth that is separated from best effort broadband Internet traffic, our broadband customers will experience no impact on broadband services resulting from Specialized Service traffic.

III. **Impact of Middle Mile Capacity Constraints**

RC must purchase Middle Mile capacity and/or services from other entities for routes approximately 50 miles long between RC service area and the closest Internet nodes.

RC has no ownership interest in its Middle Mile providers. RC cannot guarantee that it will be able to obtain additional Middle Mile capacity at commercially reasonable prices if and when needs for additional Middle Mile capacity arise.

Commercial Terms and Conditions

The commercial terms and conditions of RC's broadband Internet access services are contained in greater detail in the: service offering/acceptable use/privacy portions of this website. This section provides a brief overview or reference to terms and conditions detailed elsewhere, plus discussions of other terms and conditions required by the FCC's Open Internet Framework.

I. **Pricing Terms and Conditions**

RC offers different tiers and levels of service at different prices, and changes these from time to time. These service tiers and prices are detailed in the service offering portion of this website.

RC does not impose usage-based fees upon certain tiers or levels of its service.

RC does impose fees for early termination with respect to certain service arrangements. These early termination fees are imposed upon the service arrangements specifically identified in the DSL page of the web site for residential and business in the manner and under the conditions set forth therein and within application the customer authorizes.

RC assesses fees for additional network services as indicated on the internet page of the web site for residential and business. In addition, RC is willing to consider and negotiate prices for customized additional

network services requested by specific customers or edge service providers if such services can be designed, developed and furnished in a commercially reasonable manner. If and when such customized services are developed and furnished, RC reserves the right to adapt and provide them to other customers on a non-discriminatory basis so long as such subsequent provision does not entail disclosure of proprietary or confidential information of the initial customer.

II.   No Unreasonable Discrimination

RC does not unreasonably discriminate in its transmission of traffic over the broadband Internet access services of its customers. It endeavors to give its customers as much choice and control as practicable among its different service offerings and among the content, application, service and device offerings of edge service providers. When reasonable network management practices entail differential treatment of traffic, the Company does not discriminate among specific uses, or classes of uses, of its network.

RC does not impair, degrade or delay VoIP applications or services that compete with its voice services and those of its affiliates.

RC does not impair, degrade, delay or otherwise inhibit access by its customers to lawful content, applications, services or non-harmful devices.

RC does not impair free expression by actions such as slowing traffic from particular websites or blogs.

RC does not use or demand "pay-for-priority" or similar arrangements that directly or indirectly favor some traffic over other traffic.

RC does not prioritize its own content, application, services, or devices, or those of its affiliates.

III.   Privacy Policies

As indicated above, RC's network management practices do not generally entail inspection of network traffic.

RC retains and stores certain traffic information (such as the identity of the customer using a particular IP address during a specific period) for time periods required by federal or state law.

RC retains, stores and provides to law enforcement any traffic information requested pursuant to the procedures of the Communications Assistance for Law Enforcement Act ("CALEA"), the Foreign Intelligence Surveillance Act ("FISA") or other applicable national security or criminal statutes.

RC does not collect, store or use traffic information to profile its customers in order to sell additional services to them, or for similar non-network management purposes. RC collects traffic data for troubleshooting purposes and to gauge the amount of bandwidth a particular IP address is using.

RC's other privacy policies and procedures are listed in the Privacy Policy section of this website.

IV.   Redress Options

Questions and complaints regarding the foregoing matters should be addressed to RC's Customer Care at 336-879-5684 or csrep@rtmc.coop.

RC strongly desires to resolve questions, complaints and other problems of its customers and edge service providers in an informal and direct manner that satisfies all interested parties to the greatest extent practicable.

Customers and edge service providers that are not able to obtain satisfaction from RC have the option of invoking the FCC's informal and formal complaint procedures regarding Open Internet Framework disputes.
